Profile

I am Ajibade Emmanuel a fullstack Software Engineer with 3 years of real life experiences writing server routes, querying databases, creating scalable mobile applications, consuming and implementing both REST and graphql APIs, as well as implementing beautiful well design wireframes.

Problem Solving really gets me excited, whether it is debugging errors in a set of codes, finding out where the lapses are in a system or figuring out complex math problems are all my interests.

Some of the tools I used include: Typescript, Express.js Next.js, React.js, React Native Node.js, MongoDb, Tailwind CSS, Chakra UI e.t.c

Education

Bsc/ Mathematics and Computer Science, *University of Lagos*

Professional Experience

Frontend Engineer, System Analyst, *Myrtle Technologies*   01/2023
At Myrtle Technology, I was heavily involved in building the farmers record app agrictrail.com. I worked closely with the backend developer and the UI designer to make the ideas come to reality. I built the authentication, onboarding and settings of the application system using graohyql syntax to communicate with the server

Frontend Engineer, *Gembrs*   2022
I was part of the team responsible for building the frontend of the community membership platform gembrs.com. Building gembrs, I worked with some tools like Next.js, and Typescript. Some of the features I worked on include the schedule feature, where a community manager can schedule the time and date he or she wants to send bulk message to it members

Coding Tutor, *Coderina*
At Coderina I am commited to teaching students and young people how to code, and speaking to young people about coding and robotics.

Projects

Moskol website, *A fullstack website for Moskol Engineering* ↗
I built both the frontend and the backend of this project using the express and NEXTJS. I also used JWT for the authorization. In the project, the registered admin can buy, edit, delete a product. He can also add, delete, and modify the company's services, while the registered client can only buy products.

System Analyst, *Analysis and design of Tech extracurricular activities for RemmyGrace School* ↗
I worked as the project manager and analyst for this project. it involved studying the existing teaching system, planning and integrating tech to the curriculum through a third party edtech company

Movie app, *An application that displays searched movies details* ↗
This application allows user to search for movies they want to know about. It summarizes the details of movies for the user. I built it using React Native as the basic tool
